

## Power Supply Pedestals

The power supply pedestals are multifunctional service blocks for the distribution of electricity, water, television and data, prepared to resist the hard sea environment.

We provide several models, but our designs are aimed to our customers needs. We produce each service block according to the specifications of each request, and customized to fit the needs.

## FEATURES

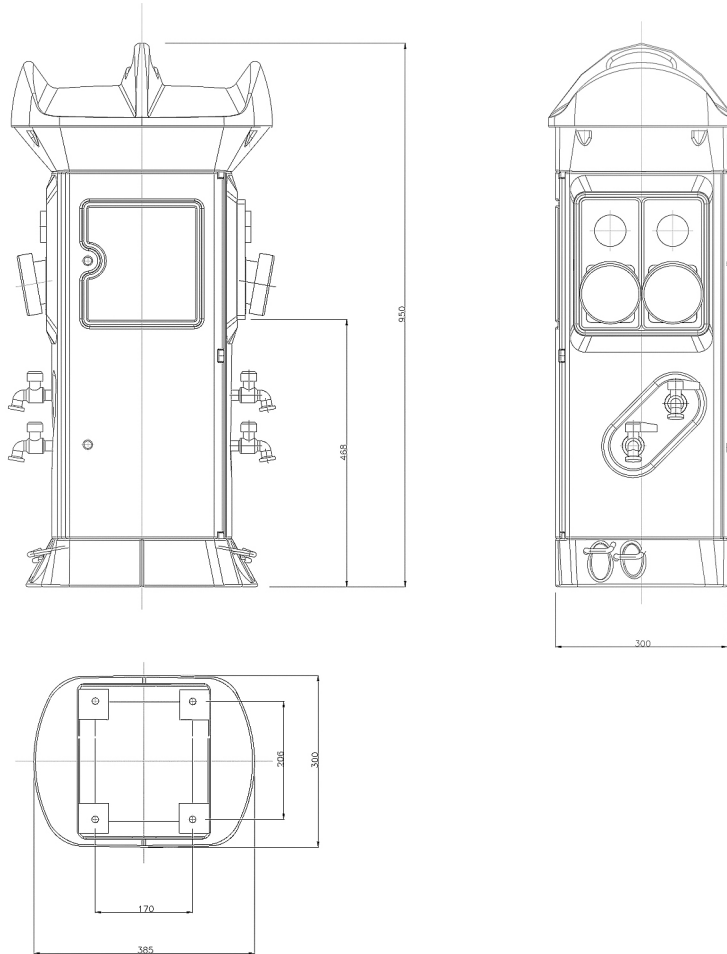

### Stainless Steel

- Wiring and empty versions for ports, campgrounds and urban and industrial areas.
- Maximum resistance to atmospheric, chemical, mechanical and UV agents.
- Option of centralized management and pre-paid block.
- Taylor-made models under request, with wiring and certification.

### Insulating Material

- Insulated with 6 different envelopes.
- High resistance to atmospheric, chemical, mechanical and UV agents.
- Colouring in the raw material to ensure durable performance.
- Option of centralized management and pre-paid block.
- Taylor-made models under request, wiring and certification.

## Power Supply Pedestals

- We can supply totally empty block.
- Block with light, supplied with 16W/ 230V fluorescent lamp.
- Switches, sockets and taps based on customer specifications.

### Specifications

- Box header of thermally stable material.
- Stainless steel socket with shock-and abrasion-resistant protective cover made of insulating material that is easily removed.
- Stainless steel cable clamp device.
- Box with hinge opening and possibility to install a safety lock for the access to modular mechanisms.
- 16mm<sup>2</sup> or 35mm<sup>2</sup> power strip.
- Possibility of water and electricity points on both sides of the block.
- CEI 17-13/1 (European Standard EN 60439-1).
- Protection grade IP 55 and IP56.
