

Yacht Cradles and Stands

One way to save space on docks and shipyards is through the use of cradles and stands. In PowerPort, we supply both for sailboats and larger boats.

Standard sizes and custom manufacturing capability to provide customer specifications.

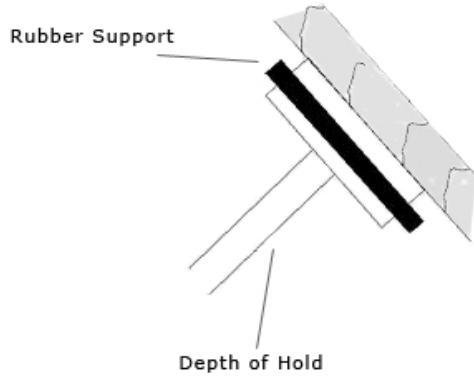

FEATURES

- Practical and robust design.
- Simple but strong structure that supports the weight of the boats.
- Easily adjustable to meet any needs in terms of size.
- Quick and easy modular assembly.
- It is provided fully galvanized BS 729 steel.

- Recommended for boats up to 16 metres. For larger sizes, it is necessary to use additional brackets.
- Easy assembly and disassembly of the structure for easy transport.
- Highly resistant to hard marine environment.
- Minimal maintenance, maximum duration.

Yacht Cradles and Stands

Possibility of manufacturing under customer specifications, both in size and in materials.

Security

- All cradles and/or stands must be specific to the type and size of ship that will support.
- Made of galvanized steel.
- The base of the stand should be wider than the maximum width of the sleeve of the boats, to get a support angle of 50-70 degrees.
- Stands should be used only for boats for which they were built.
- Any support system should be inspected at least once a year.
- All fixings provided with the supports and cradles should always be used.
